

COMPANY & PRESS FACT SHEET

The agentic operations platform for your *digital workforce*.

Opal is the operational foundation where people, agents, knowledge, and systems work together in one governed environment — so organizations can operationalize AI as a core business capability.

WHAT OPAL IS

One unified environment for your *digital workforce*.

Opal is an end-to-end agentic operations platform. Rather than relying on isolated AI tools, organizations use Opal to operationalize AI as a core business capability — with governance, orchestration, and knowledge management built in.

THE PROBLEM OPAL SOLVES

Isolated AI tools aren't enough on their own.

As AI adoption matures, organizations need an operational foundation that coordinates people, agents, knowledge, and systems at scale — with the oversight and accountability to deploy AI responsibly. Opal is built to be that foundation.

WHAT MAKES OPAL DIFFERENT

01 / FOUNDATIONAL

Infrastructure, not a tool

Treats AI as foundational infrastructure, not an isolated productivity add-on.

02 / HUMAN-CENTERED

Built to augment people

Designed to augment people, not replace them — judgment stays human.

03 / ACCOUNTABLE

Oversight by design

Security, accountability, and oversight built in from the start.

04 / OPEN

Model- and vendor-agnostic

Freedom of choice across models, vendors, and the systems you already run.

KEY MESSAGING PILLARS

Five ways Opal runs your *digital workforce*.

The core themes that describe what Opal does and how it operationalizes AI across the organization.

01	Human-agent collaboration	People and agents working together across planning, decisions, and execution.	
02	Knowledge management	A centralized foundation for both human understanding and agentic execution.	
03	Agentic orchestration	Coordinating work across people, agents, systems, and processes.	
04	Governance & control	Policies, permissions, and oversight to deploy AI responsibly at scale.	
05	Open & flexible	Model- and vendor-agnostic by design.	

MISSION

To give every organization the agentic operations platform to coordinate people, agents, knowledge, systems, and processes as one digital workforce.

VISION

A future where every organization runs people and agents as one digital workforce — unlocking new levels of capacity, efficiency, and innovation.
